Ventilation function, 1000 Watt or 2000 Watt

Room thermostat via temperature

Protection from overheating

The LED display provides an overview

For use in damp rooms

Setting on the unit or via remote control

Bathroom fan heater 2000 watts

This fan heater fits discreetly into your bathroom thanks to its innovative design and is very well suited as an additional heater or for ventilation thanks to its fast and effective heat distribution.

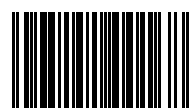

The room thermostat of the bathroom fan heater can be set to the desired temperature, and the heat output can be selected in two stages.

With its 2000 watts max. power, it ensures fast and effective heat distribution and is safely suitable for operation in damp rooms thanks to the integrated overheating protection and IPX2--certification.

The programming of weekly programmes and the detection of open windows perfectly round off the range of functions.
