- 2 years

With this high-quality multifunctional pizza oven, you can bring the Italian way of life straight into your home. The elegant design blends harmoniously into any modern kitchen, while the powerful technology ensures crispy results in record time.

Thanks to the maximum power of 2000 watts and the top and bottom heat, your pizza is baked evenly - crispy on the outside, deliciously juicy on the inside. The adjustable thermostat up to 450 °C also makes real Neapolitan pizza possible. The digital control with illuminated touch control panel and LED display enables simple and intuitive operation.

Choose from six preset pizza programmes - including options for thin crust, New York style or frozen pizza - or set your own programme. Four additional functions are available: Grill, bake, gratinate and roast. This means that the oven can be used not only for pizza, but also for many other dishes.

Your pizza will be ready in no time - ideal for spontaneous moments of pleasure! The integrated 12-hour timer and overheating protection ensure safety and convenience at all times.

Specifications:
