This high-quality pedestal fan combines modern design, quiet operation and powerful technology in one device. With an output of 40W, it reliably ensures that the air in the room is cooled and evenly distributed - ideal for warm summer days or stuffy interiors.

The integrated silent motor operates particularly quietly, allowing it to be used in the bedroom, office or living room without disturbing sleep or concentration.

Thanks to its 3D oscillation (swivelling up/down and left/right), the fan distributes the air optimally throughout the room. Eight wind levels and three preset speeds (low, medium, high) allow the intensity to be flexibly adjusted - from a gentle breeze to powerful air circulation.

For added convenience, the pedestal fan has a digital display, a touchscreen and a remote control with which all settings can be conveniently made. The 12-hour timer allows the fan to switch itself off when required.

The fan also has an integrated aroma box in which you can place scented oils or aroma pads. This combines the pleasant airflow experience with your favourite fragrance.
